### Task Allocation and Tracker

|  | Task Allocated                                                                                              | Assigned Member | Deadline  | Completion Status<br>(Not Started/In Progress/Completed/Did not participate) | Reviewed by Team?<br>(Yes/No) | Comments                                                                                                                                                                                                                           |
|--|-------------------------------------------------------------------------------------------------------------|-----------------|-----------|------------------------------------------------------------------------------|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | Will build the page structure in index-flexbox.html using semantic tags (header, nav, main, aside, footer). | Ridaa           | 6/10/2026 | Completed                                                                    | Yes                           | Clean, semantic HTML structure with proper header, nav, main, aside and footer tags. Good use of ARIA labels and a skip link, and keeping main first in the source order is a smart accessibility choice.                          |
|  | Will build the page structure in index-grid.html using semantic tags.                                       | Kami            | 6/10/2026 | Completed                                                                    | Yes                           | Well-structured semantic HTML that mirrors the Flexbox page closely, which makes the two versions easy to compare. Consistent class names and good accessibility attributes.                                                       |
|  | Will write base.css: colours, fonts, cards, sidebars and other styling used by both versions.               | Aliya           | 6/10/2026 | Completed                                                                    | Yes                           | base.css gave both versions a consistent look. Using custom properties, clamp() for fluid sizing and container queries for the cards shows strong understanding. The focus styles and collapsible sidebars are thoughtful touches. |
|  | Will write the Grid layout with named areas and the responsive breakpoints.                                 | Teta            | 7/10/2026 | Completed                                                                    | Yes                           | Strong Grid work: named grid-template-areas, four clear breakpoints, and a responsive card gallery in one line with auto-fit and minmax(). The mobile-first approach and clear comments make the file easy to read.                |

|  |                                                                                     |       |           |           |     |                                                                                                                                                                                                                                             |
|--|-------------------------------------------------------------------------------------|-------|-----------|-----------|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | Will write the Flexbox layout and the responsive breakpoints for tablet and mobile. | Chris | 7/10/2026 | Completed | Yes | Good start on the Flexbox layout, and the flex-basis and order logic for tablet and mobile is on the right track. The next step is making the CSS cover the whole page (header, nav, cards, footer columns) so it matches the Grid version. |
|  |                                                                                     |       |           |           |     |                                                                                                                                                                                                                                             |
|  |                                                                                     |       |           |           |     |                                                                                                                                                                                                                                             |
|  |                                                                                     |       |           |           |     |                                                                                                                                                                                                                                             |
|  |                                                                                     |       |           |           |     |                                                                                                                                                                                                                                             |
|  |                                                                                     |       |           |           |     |                                                                                                                                                                                                                                             |

### Meeting Attendance Log
